

Supplementary Materials

Supplemental 3 figures and 4 tables

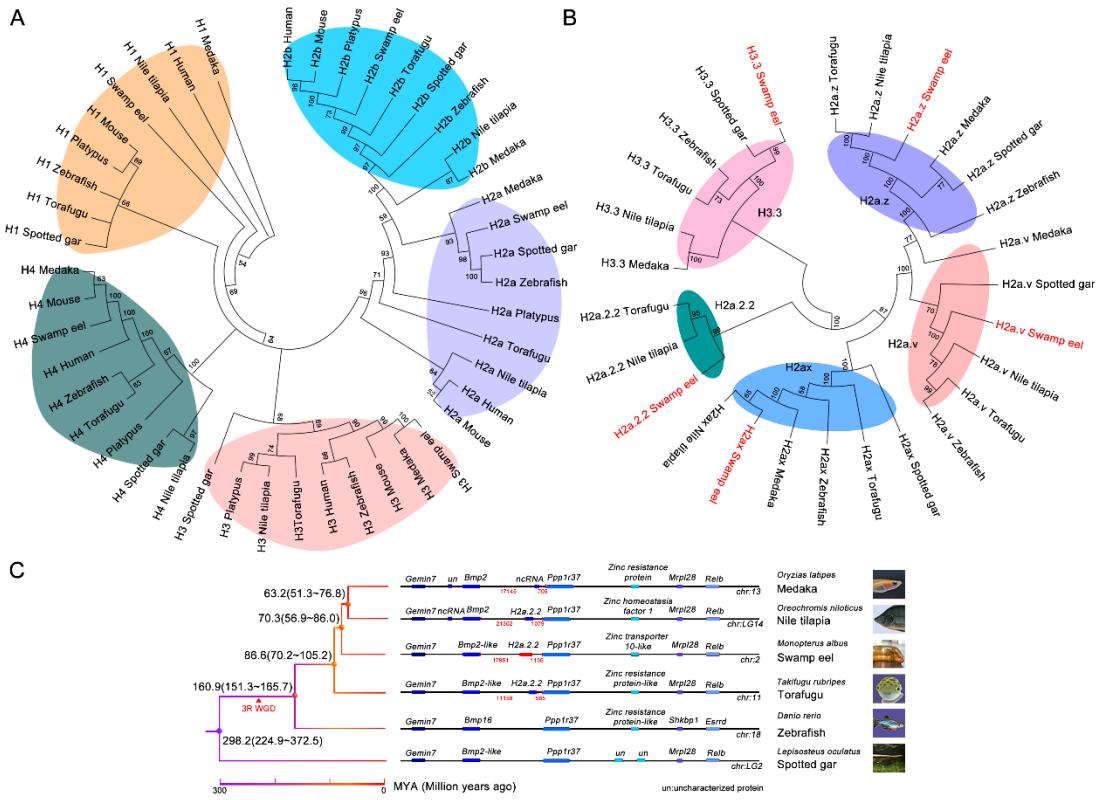

Figure S1: Phylogenetic tree of histones in vertebrates.

The phylogenetic tree was constructed using maximum-likelihood method based on the amino acid sequences of histones. (A) The histone in the phylogenetic tree were from human (*Homo sapiens*), mouse (*Mus musculus*), spotted gar (*Lepisosteus oculatus*), platypus (*Ornithorhynchus anatinus*), zebrafish (*Danio rerio*), tilapia (*Oreochromis niloticus*), medaka (*Oryzias latipes*), torafugu (*Takifugu rubripes*), and swamp eel (*Monopterus albus*). Five histone proteins of *Monopterus albus* were grouped into 5 clusters of the histone. (B) The histone variants in the phylogenetic tree were from the *Monopterus albus*, spotted gar (*Lepisosteus oculatus*), zebrafish (*Danio rerio*), torafugu (*Takifugu rubripes*), tilapia (*Oreochromis niloticus*), medaka (*Oryzias latipes*). Five histone variants proteins of *Monopterus albus* were grouped into 5 clusters of the histone variant. (C) Arrangement of late histone h2a.2.2 on chromosome 2 of *Monopterus albus*, and the relative positions of these genes on the corresponding chromosomes in several related species. From top to bottom species are the medaka, tilapia, swamp eel, torafugu, zebrafish and spotted gar. The protein sequences above were from NCBI and Ensemble.

Figure S2: Homologous alignment of fish histone variants.

Using Clustal Omega (<https://www.ebi.ac.uk/Tools/msa/clustalo/>) to comparison of histone variants of Swamp eel (*Monopterus albus*) with its homologs from other fishes, such as, spotted gar (*Lepisosteus oculatus*), zebrafish (*Danio rerio*), torafugu (*Takifugu rubripes*), tilapia (*Oreochromis niloticus*), medaka (*Oryzias latipes*). Five histone variants proteins of *Monopterus albus* were grouped into 5 clusters of the histone variant. Symbol key: * for the same amino acid; ":" amino acid sequence with a strong similarity; "." Amino acid sequence with a weak similarity.

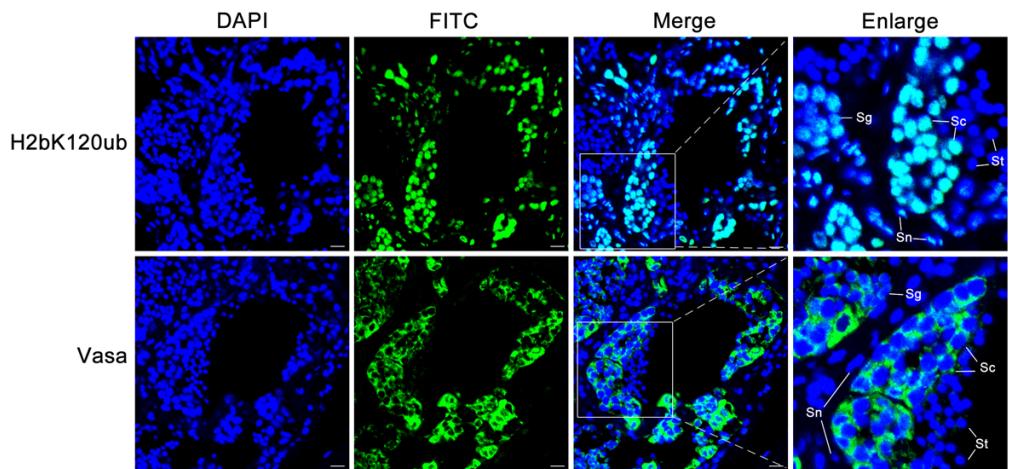

Figure S3: Expression of H2bK120ub in testis of *Monopterus albus*.

Immunofluorescent localization of H2bK120ub and Vasa proteins in testis using anti-H2bK120ub and anti-Vasa antibody. H2bK120ub was expressed in the nuclei of Sertoli cells and germ cells in testis, while Vasa was mainly expressed in the cytoplasm of germ cells. The nuclei were stained by DAPI. Sn, Sertoli cells; Sg, spermatogonia; Sc, spermatocytes; St, spermatids. Scale bar: 10 μ m.
